

24 Hour Science Map Event

Let's learn about maps!

4PM on Dec 11, 2021

9PM in London (GMT), 6AM in Tokyo (GMT+9)

Salon

With Ryan McGranaghan (*Principal Data Scientist/Aerospace Engineering Scientist at Atmospheric and Space Technology Research Associates, LLC*)

Themes:

- Mapping knowledge vs. Mapping what we *don't* know (map of questions that lead to this imaginary/counterfactual map)
 - How does this change our framework of mind?
- How do we visualize different ways of knowing as a way to create consilience?

Hosts

Background:

Since April 2020 there has been a new Community of Practice (CoP) growing that operates in the spaces between fields and around the idea of converging people, disciplines, and ways of knowing. The new sensibility of *antidisciplinary* (or consilience or liminality) emerges from an enhanced plurality of thought. The CoP has been cultivating this sensibility and plurality of thought through a new avenue for antidisciplinary interaction - a 'salon' series. It has come to be known as the *Flourishing Salons*.

On October 5, 2021, the Flourishing Salons partnered with the National Academy of Sciences to host a salon "[Seeing the World with New Eyes via Data Visualizations](#)" that connected a wider community to explore these ideas.

This latest salon will amplify that momentum to catalyze the community.
